(Use Your TAMU Net ID and Password to Log on)

“MediaMatrix is a specialized database application provided by IMS to handle internet media streaming content. It allows content creators at Texas A&M University to have more control over the distribution of their streaming or downloadable media content. The system is also designed to protect against copyright infringements and theft of intellectual property. If you are a TAMU faculty or aide, you may request a Content Manager account to manage your own streams. I am the Content Manager* for Library owned video and music recordings.”

Internet Media Services (IMS)

<http://imedia.tamu.edu/>

“The primary function of the IMS is to provide streaming services to supplement, or in some cases be the primary source of educational content to instructional courses”.

Educational Media Services
